EXAM - Condition: OTHER - Treated By: 16581

MEDICATIONS FOR PARASITE CONTROL

Pyrantel pamoate given orally for the treatment of intestinal parasites

Parasites can cause diarrhea and even anemia, coughing and death. Your pet may look healthy but can spread infections and cause environmental contamination. Several intestinal parasites of dogs & cats are zoonotic – that is, they can also cause disease in human beings.

-Please follow up with treatment with your regular veterinarian.

Bravecto for Dogs applied topically once every 12 weeks for the treatment of fleas/ticks. While the product may appear to work slowly it does take time to have the full effect. Please do not apply additional products for the fleas/ticks.

Individual sensitivities, while rare, may occur after using any pesticide product. If signs continue, consult a veterinarian immediately.

Medication(s)

4.60 CC PYRANTEL 1 time/day for 1 days

1.90 DOSE BRAVECTO 44-88 LBS 1 time/day for 1 days

HW DIRECT SMEAR POS

What is the problem? Heartworm disease was diagnosed by a direct smear blood test.

Heartworms are parasites that live in a dogs heart. Heartworm disease is spread from dog to dog by a mosquito.

What still needs to be done? Follow up at regular veterinarians office

What happens now? Keeping your pet quiet is extremely important until your veterinarian clears your pet. This means leash walks only to go outside to the bathroom. Your dog should have no activity.

Resources: Please refer to www.veterinarypartner.com. Type "heartworm" in the search field.
